- ZIMMERMANN, H. D.: see Boseck, S., (Abstract) 251

1. The first part of the paper is devoted to a general
discussion of the problem. It is shown that the
problem is of great importance in the theory of
the differential equations of the second order.
The second part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.
The third part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.
The fourth part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.
The fifth part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.

2. The first part of the paper is devoted to a general
discussion of the problem. It is shown that the
problem is of great importance in the theory of
the differential equations of the second order.
The second part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.
The third part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.
The fourth part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.
The fifth part of the paper is devoted to a
detailed study of the problem. It is shown that
the problem is of great importance in the theory
of the differential equations of the second order.

THE MICROSCOPE

SUBJECT INDEX

VOLUME 21

- IIMC analysis techniques for liquid-borne contaminants, (Abstract) 250
 IIMC system, airborne contamination assessment and control, (Abstract) 249
 AEI IM-20, recent developments, (Abstract) 244
 Airborne contamination, assessment and control using the IIMC system, (Abstract) 249
 Analysis of clay fabrics, (Abstract) 257
 Aristophot, photomacrography, 215
 Asbestos,
 analysis using a Quantimet 720, (Abstract) 262
 identification, (Abstract) 262
 Automated particle analysis system, 121
 Automatic image analysis, (see Image analysis)
 Automation of counting asbestos fibres using a Quantimet 720, (Abstract) 262
 Autoradiography, an automated microspectrophotometric system for rapid quantitative cytofluorimetry and reflectance autoradiography, 11
 Axiomat, 167

 Biohazard legislation, its implications for microscopy, (Abstract) 261
 Biological specimens with particular reference to environmental pollution, (Abstract) 264
 Biological tissues, electron-probe microanalysis for the study of mineral content, (Abstract) 243

 Chicken, *in vivo* study of early microvascular damage, 73
 Clay fabrics, image analysis, (Abstract) 257
 Conservation of paintings and other works of art, applications of the polarizing microscope, 101

 Contamination assessment and control using the IIMC system, (Abstract) 249
 Contamination control in the pharmaceutical industry, (Abstract) 259
 Cotton fabrics, thermoplastic polymers, 161
 Crystallography,
 dispersion of optical indicatrix, (Abstract) 253
 rare earth minerals, 39
 Cytofluorimetry and reflectance autoradiography, 11

 Dental enamel, dissolution and recrystallization, 81
 Dispersion of optical indicatrix as a key identifying characteristic for small particles, (Abstract) 253
 Dissolution and recrystallization in dental enamel, 81
 DTA-light photometer polarizing microscope system for hot stage microscopy, 29
 Dynascopic aerial image presentation, a new concept in optical image display, (Abstract) 243

 Electron effects in ion generation in the ion microprobe, (Abstract) 248
 Electron microprobe, see also EMMA, common sources of error, (Abstract) 252
 analysis for the study of mineral content in biological tissue, (Abstract) 243
 Electron microscope,
 scanning, a new approach, (Abstract) 251
 scanning, limits of resolution, (Abstract) 247
 high voltage, (Abstract) 263
 improving contrast, (Abstract) 264
 quantitative scanning, (Abstract) 244
 television scanning, (Abstract) 247

- EMMA,
metallurgical applications, (Abstract)
263
the instrument and its use, (Abstract)
248
- Environmental pollution, x-ray micro-
analysis of thin biological speci-
mens, (Abstract) 264
- Exposure time measurement in enlarg-
ing, 115
- Fraunhofer diffraction for the resolution
of unknown biological struc-
tures, (Abstract) 251
- Fundamental limitation of the replica
method, 183
- High voltage electron microscopy in
various branches of science,
(Abstract) 263
- Hot stage microscopy,
DTA-light photometer polarizing
microscope system, 29
plastisols, 210
- Hydrometeors in the laboratory, photo-
microscopical investigation of
the fragmentation, 149
- Image analyser, automatic, (Abstract)
254
- Image analysis,
automatic, (Abstract) 254
automatic pattern recognition,
(Abstract) 255
in the life sciences, (Abstract) 256
in the material sciences, (Abstract)
255
instrument for on-line sewage water
analysis, (Abstract) 246
of clay fabrics, (Abstract) 257
Omnicon system, (Abstract) 246
porosity measurement in nuclear fuel,
23
stereology, (Abstract) 256
system in pollution control, Omnicon,
(Abstract) 246
technology, automatic, (Abstract) 245
- Image structure analysis, 131
- Ion microprobe,
electron effects in ion generation,
(Abstract) 248
some unusual problems solved,
(Abstract) 253
- Irradiated chicken, *in vivo* study of early
microvascular damage, 73
- Limits of resolution in the surface scan-
ning electron microscope, (Ab-
stract) 247
- Lungs of miniature swine following
inhalation of cobalt metal partic-
les, (Abstract) 245
- Material sciences, image analysis,
(Abstract) 255
- Metallurgical applications of EMMA,
(Abstract) 263
- Microcirculation in the neutron-irra-
diated mouse, (Abstract) 259
- Microelectronic failures caused by
chlorine compounds, 107
- Micrographic reagent coloring molyb-
denum grains according to their
crystal orientation, (Abstract)
260
- Micro-organisms in the control of pollu-
tion, (Abstract) 261
- Microscopic identification of pulverized
fuel ash, (Abstract) 258
- Microscopical combustion studies of
nitrocellulose thin films in pres-
surized capillary tubes, 299;
(Abstract) 260
- Microscopical methods, time saving
application, (Abstract) 258
- Microspectrophotometric system for
rapid quantitative cytofluori-
metry and reflectance autoradio-
graphy, 11
- Microvascular damage in the irradiated
chicken, 73
- Mineral control in biological tissues,
electron microprobe analysis,
(Abstract) 243
- Molybdenum grains according to their
crystal orientation, improvement
of the micrographic reagent
coloring, (Abstract) 260
- Mouse, procedure for duration of life
observation of the microcircula-
tion, (Abstract) 259
- Nitrocellulose thin films in pressurized
capillary tubes, 229; (Abstract)
260
- Nuclear fuel by image analysis, porosity
measurement, 23
- Omnicon image analysis system in pollu-
tion control, (Abstract) 246
- Optical crystallography of two rare
earth minerals, 39

- Optical indicatrix, a key identifying characteristic for small particles, (Abstract) 253
- Optical scanning microscopy, OTF enhancement scheme, (Abstract) 264
- Optical studies of the elevated temperature behavior of foamable vinyl plastisols, 201
- OTF enhancement scheme for optical scanning microscopy, (Abstract) 264
- Particle analysis system, automated, 121
electron microprobe, (Abstract) 252
- Particulate pollutants, application of the Quantimet 720, (Abstract) 249
- Pattern recognition by automatic image analysis, (Abstract) 255
- Pharmaceutical industry, contamination control, (Abstract) 259
- Photomacrography with the Leitz Aristophot, 215
- Photomicrographs taken through the Wild M20 microscope, 177
- Photomicroscopical investigation of the fragmentation of hydrometeors in the laboratory, 149
- Plastisols, optical studies, 201
- Polarizing microscope, in the conservation of paintings and other works of art, 101
hot stage methods, 29
- Porosity measurement in nuclear fuel by image analysis, 23
- Polymers and knitted cotton fabrics, 161
- Pulverized fuel ash, microscopic identification, (Abstract) 258
- Quantimet 720, automation of counting asbestos fibres, (Abstract) 262
in the monitoring of particulate pollutants, (Abstract) 249
- Quantitative analysis of distribution and orientation of dispersed phases in multiphase materials, 49
- Quantitative detection of alpha particles in certain dielectric materials, (Abstract) 257
- Quantitative determination of surface topography by light microscopy, 59
- Quantitative scanning electron microscopy, (Abstract) 244
- Rare earth minerals, optical crystallography, 39
- Recrystallization in dental enamel, dissolution, 81
- Replica method, fundamental limitation, 183
- Scanning electron microscopy, a new approach, (Abstract) 251
limits of resolution in the surface, (Abstract) 247
quantitative, (Abstract) 244
television, (Abstract) 247
- Schlieren microscope, applications, (Abstract) 254
- Stereology in automatic image analysis, (Abstract) 256
- Superresolution in microscopy, 1
- Surface topography by light microscopy, quantitative determination, 59
- Technical writing and translating for microscopists, (Abstract) 259
- Television scanning electron microscopy, (Abstract) 247
- Thermoplastic polymers and knitted cotton fabrics, 161
- Ultrastructure of the lungs of miniature swine following inhalation of cobalt metal particles, (Abstract) 245
- Wild M20 microscope, the use of the drawing tube and camera in combination to prepare interpretive line drawings of photomicrographs, 177
